

Challenge 1

UI Design

Exam Objectives Covered

- Arrange UI components on the canvas according to a defined layout using anchors, pivots, and groups

Challenge Overview: Designing the UI Title Screen

Welcome to the final section of your SkiFree-inspired game development course! User interfaces play a crucial role in bridging the gap between a game's code and the player's experience. As a programmer, it's essential to understand both basic layout design principles and how to connect your code with UI elements.

In this session, you will create a UI title screen for your game. This title screen should be in a separate scene from the race levels you previously designed. It should include the game title, buttons to play, get help, or quit the game.

For added dynamism, an optional start scene with a Timeline component has been included in your project. When played, this Timeline displays simple animated scenes of the player throughout the level. Using this scene is optional, and you can find it in Assets > Scenes > SkiGame_Course4_Session1_ExampleTitle.

Finally, you will create a confirmation popup for when the player selects the Quit button from the menu. This confirmation box should verify that the player really wants to quit. For this challenge, you only need to design the UI, so no scripting functionality is required.

Step 1: Create and Layout the Title Screen

Design a basic title screen layout.

Instructions:

1. Set Up a New Scene:
 - Create a new scene specifically for the title screen or use the provided example title scene.
2. Add UI Elements:
 - Game Title: Add a text element for the game title. You can name your game anything you want!
 - Play Button: Add a button that will eventually start the game.

- Help Button: Add a button that will eventually display help information.
- Quit Button: Add a button that will eventually quit the game.

Step 2: Create and Layout the Quit Confirmation Popup

Design a confirmation popup that appears when the player selects the Quit option.

Instructions:

1. Add Popup UI Elements:

- Confirmation Text: Add a text element that asks, "Do You Want to Quit?"
- Yes Button: Add a button that will eventually confirm the quit action.
- No Button: Add a button that will allow the player to cancel and return to the title screen.

Once you've completed these steps, your game will have a foundational UI title screen and a functional quit confirmation popup.

Good luck with designing your UI! This exercise will help you develop skills in UI layout and basic interaction design in Unity. Happy developing!
